Series and
Conditional
Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

Consider the following series:

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n} = 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \frac{1}{5} - \dots$$

A Series

Alternating

Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

Consider the following series:

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n} = 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \frac{1}{5} - \dots$$

This series appears to be related to the harmonic series, but also very different:

$$\sum_{n=1}^{\infty} \frac{1}{n} = 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \dots$$

Harmonic Series

Divergence of the Harmonic Series

Alternating
Series and
Conditional
Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

We can show that the harmonic series is divergent as follows:

$$\begin{aligned}\sum_{n=1}^{\infty} \frac{1}{n} &= 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} + \cdots \\ &\geq 1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{4} + \frac{1}{8} + \cdots \\ &= 1 + \frac{1}{2} + \frac{1}{2} + \frac{1}{2} + \cdots \\ &= \infty\end{aligned}$$

Differences

Alternating
Series and
Conditional
Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

However, our alternating harmonic series is different. Taking partial sums, we get the following sequence:

$$s_n = \sum_{k=1}^n \frac{(-1)^{k+1}}{k}$$

$$s_1 = 1$$

$$s_2 = \frac{1}{2}$$

$$s_3 = \frac{5}{6}$$

$$s_4 = \frac{7}{12}$$

\vdots

Clearly, this sequence does not grow without bound — it is bounded above by 1, and doesn't seem to dip below $\frac{1}{2}$

Convergence

Alternating
Series and
Conditional
Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

The alternating harmonic does converge. Specifically,

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n} = \ln 2$$

Convergence

Alternating
Series and
Conditional
Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

The alternating harmonic does converge. Specifically,

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n} = \ln 2$$

...or does it?

Rearranging the Alternating Harmonic Series

Alternating
Series and
Conditional
Convergence

Avinash Iyer

Alternating
Harmonic
Series: An
Analysis

Rearrange the series as follows:

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n} = \left(1 - \frac{1}{2}\right) - \frac{1}{4} + \left(\frac{1}{3} - \frac{1}{6}\right) - \frac{1}{8} + \dots$$
